Application/Control Number: 10/056,683

Art Unit: 2155

A new title and a new abstract which are more aptly descriptive of the invention claimed (see claims 37, 38 and 10 for example) are required.

Claims 1-44 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Scope of claims is not clear. It is not clear what the apparatus tries to accomplish. It is not clear what the result is by processing the probabilistic parameter sampled traffic information, attribute and data element. No meaningful result or network management is seen.

There is no clear meaningful relationship between the steps of independent and dependent claims. For example, how would claims 2-4 and 6-9 affect step b of parent claim 1 in determining whether to sample the object in accordance with a probabilistic parameter? More example, the scope of claim 5 is not clear if the at least one attribute is not identified. Another example, claims 1 and 10 are as if they are independent from each other. No relationship between the steps of the two claims is seen. Claims 11-19 have similar defect. Applicants are requested to identify the support of each claims in the specification. The term and phrase used in the claims must find clear support or antecedent basis in the description so that the meaning of the terms and phrase may be ascertainable by reference to the description. Rule 1.75d1.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

A PRINCE OF THE PRINCE OF THE

Art Unit: 2155

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-38 are rejected under 35 U.S.C. 102(a) as being anticipated by Torres (6,725,263).

See at least the title, the abstract, Figures 1-2 and the description thereof in Torres. Torres teaches an apparatus for managing a data network comprising a data interface (280) and a processor (220). The court held that claims directed to apparatus must be distinguished from the prior art in terms of structure rather than function. *In re Danly*, 263 F.2d 844, 847, 120 USPQ 528, 531 (CCPA 1959. "[Apparatus claims cover what a device is, not what a device does." *Hewlett-Packard Co. v. Bausch & Lomb Inc.*, 909 F.2d 1464, 1469, 15 USPQ2d 1525, 1528 (Fed. Cir. 1990). A claim containing a "recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus" if the prior art apparatus teaches all the structural limitations of the claim. *Ex parte Masham*, 2 USPQ2d 1647. See MPEP 2114. Torres meets all the structural limitations.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-36 and 39-44 are rejected under 35 U.S.C. 103(a) as being unpatentable over Spencer (USP 5,197,002).

With respect to claims 1 and 39, see the abstract and Figures 1, 4 and 5 in Spencer. Spencer teaches an apparatus (billing system 19) for managing a data

Application/Control Number: 10/056,683 Page 4

Art Unit: 2155

network (14) comprising a data interface and a processor (Figure 5). The billing system of Spencer receives objects (billing information of customer) having attribute and data element (customer ID and usage information, for example, or other information in order to generate a billing statement) and process the received objects to generate a billing statement.

Spencer did not disclose how the billing information is sampled or processed in accordance with a probabilistic parameter. It would have been obvious to a person of ordinary skill in the art to use an algorithm for processing customers' billing statement dependent on the business decision of he service provider.
